

## **Test assignment - Backend developer 2023-01-16 updated**

Need to create a service class that implements App\ShippingServiceInterface interface.

Service should send a command to **Amazon's fulfillment network (FBA)** to **fulfill** seller order **using seller inventory in Amazon's fulfillment network (FBA)** and return the tracking number as string for this order when method ship will be invoked.

Link to FBA API documentation: <https://developer-docs.amazon.com/sp-api>

Please update, how much time did the assignment take.

Thank you, and good luck!

Valigara team

## **FAQ to the test assignment 2023-07-18 updated**

1. Do I need to obtain an API key?

No, there are other options to achieve the goal without direct way for creating a sellers account and get API keys.

2. Do I need to write tests?

At your discretion. It's always good to check yourself.

3. Can I use third-party libraries?

At your discretion.

4. Should the project launch and function?

It will help us to evaluate your work properly.

5. Should I envision this as part of an existing project or a new project from scratch?

A project from scratch. Envision as if you were implementing it as a work project, not as a test task.

6. This looks like a real task to be done. I want it to be paid.

This task was executed 2 years ago and was chosen just as an entry test to check basic ability to get job done.

7. Am I limited in tool usage?

You can use any tool within the PHP stack.
